Mystery Place and Time cube

1. Cut out the template on pages 1 and 2.
2. Stick the tabs with the stars (★) together.
3. Fold and stick to form a cube.

The once frozen lands of the northeast have thawed enough for farming to take place there. This country is now a net exporter of food.

In the past ten years, people in this country have enjoyed reduced heating bills, thanks to warmer winters.

The capital of this country is on the same latitude as Newcastle, England.

Stick this tab to the side with the star ★

Make in advance or cut off before handing to students.

Thawing permafrost in the north has opened up trade routes and made it possible to extract previously inaccessible minerals there.

The climate of this country varies from the warm southwest to the cold northeast, where snow and ice are common.
